ABOUT ME

https://mucahid.dev
https://github.com/mucahidyazar
https://medium.com/@mucahidyazar
https://dribbble.com/mucahidyazar

I have been working as a Frontend Developer for almost 4 years and I am trying to improve myself to be a good Full Stack developer. I can design Restful API with NodeJS, GraphQL, and Prisma, I am comfortable with Javascript and Typescript. I have lots of experience with React and Next.js. I can manage your SASS projects with all my experience and create what you want in Pixel Perfect. I can manage your SASS project with AWS. Currently, I am interested in Blockchain, Smart Contracts(AWS), and AWS technologies. And I want to improve my skills in these areas for next years. And I also love creating beautiful designs on Figma. You can look at some of my works in my Dribble profile. And I am writing technical articles on **Medium** and my blog. I like to share and learn some new stuff in this way.

WORK EXPERIENCE

Frontend Web Developer
Getir [01/02/2021 – Current]

City: Istanbul
Country: Turkey

I have been working at Getir for almost 1.5 years. I learned and experienced amazing technologies and engineering skills in Getir. I am working on lots of big projects. These are Getir's main project which is a grocery delivery web application, and we are using and developing our own UI library which is web-components project, we are using Strapi to develop the static pages, and we are developing livechat-components for customer services. We moved the main application pure next.js project to NX project. And we get the ability of a micro frontend structure. And also I moved the UI library to monorepo base by using Lerna in 30 days. I prepared a presentation and I presented the new UI library to the Getir engineers for an hour. But it has been rejected by the team and we shelved it. But that was the most exciting work for me at Getir so far.

The Projects I am worked on:
- Getir
- Getir Yemek
- web-components(Getir's UI Library)
- getir-cms (Strapi Project)
- livechat-components(Getir's Chat Library by Zendesk)

technologies: ['React', 'Next.js', 'Redux', 'Redux-Saga', 'Next.js', 'Styled-Components', 'Webpack', 'Jest', 'Enzyme', 'Git', 'Sentry', 'New Relic', 'Spinnaker', 'Docker', 'Bitbucket', 'Bitbucket Pipelines', 'Cypress', 'React Testing Library', 'Enzyme', 'Web Components(Getir's UI library)', 'next-i18next', 'React Hooks Form', 'Strapi', 'Storybook', 'Docker', 'Slack', 'Figma']

Web developers
Maxithings [15/09/2020 – 01/02/2021]

City: Istanbul
Country: Turkey

I worked for Maxithings for almost 5 months. The company wanted me to develop a copy of the top e-commerce website(trendyol.com). I developed this e-commerce project just by myself. The big project is iyifiyat.com. I built all frontend of this website with NextJS, Typescript, React. Then before I quit I had almost finished all of the pages. I managed all of the fields of this project on frontend and I decided on all of the modules, packages, technologies by myself. I also wrote some automation test on the project(10% Because I left for Getir). After I got the offer of Getir I quit my job and I started on my new journey at Getir.

technologies: ['React', 'Typescript', 'Next.js', 'Redux', 'Redux-Thunk', 'node-sass/SCSS (for styling)', 'Gitlab', 'Gitlab CI', 'Cypress', 'Docker', 'next-i18next', 'react-hook-form', 'Discord']

Web engineer
Granobra [01/02/2018 – 31/08/2019]

City: Istanbul
Country: Turkey

I worked at Grabobra for almost 1.5 years and I worked on a main project and 2 side Frontend projects of the company. The main project is Biletsepeti.com. We built this website with React, NextJS, and Typescript as 2 frontend developers. And I also built 2 pure javascript applications(Donut App, Basic Calendar for booking).

technologies: ['React', 'Typescript', 'Next.js', 'Redux', 'Redux-Thunk', 'node-sass/SCSS (for styling)', 'Bitbucket', 'next-i18next', 'Vercel', 'Zeplin', 'Adobe XD', 'Slack']

EDUCATION AND TRAINING

Occupational Health And Safety
Maltepe University [01/01/2017 – 01/01/2019]

Address: Istanbul (Turkey)

PROJECTS

getir.com
[01/02/2021 – Current]

This is the best project I have ever worked on so far. I learned lots of things and I got two-step up together. I can say Getir is a milestone on my career. Getir is the fastest grocery app in Turkey and Getir is the biggest company in Turkey. Getir was a monolith project firstly, but at the end of 2022 we moved the app as a micro frontend base by using the tool which name is NX. And Getir has 5 sub-app inside itself. One of them is a food delivery app. I am working on that part with 3 frontend developers. I also worked the other parts time to time. But we also have responsibility on the common parts all together by 16 frontend developers. And I had responsibility also on the other apps which I wrote above on the experience section. As I said in my company section, I moved that UI library from monolith to monorepo just myself but on the voting, it has been rejected. But it was an amazing experience for me. I am coding tests with jest. And I am using all the packages below actively on the project.

technologies: ['React', 'Next.js', 'Redux', 'Redux-Saga', 'Next.js', 'Styled-Components', 'Webpack', 'Jest', 'Enzyme', 'Git', 'Sentry', 'New Relic', 'Spinnaker', 'Docker', 'Bitbucket', 'Bitbucket Pipelines', 'Cypress', 'React Testing Library', 'Enzyme', 'Web Components(Getir's UI library)', 'next-i18next', 'React Hooks Form', 'Strapi', 'Storybook', 'Docker', 'Slack', 'Figma']

https://www.getir.com
https://www.getir.com/yemek

iyifiyat.com
[15/09/2020 – 01/02/2021]

This was the second big SASS project that I had worked on. It was an e-commerce app. After Granobra and biletsepeti, I got my second full-time job at Maxithings. It was a startup. And they hired me to manage and built a SASS project. They wanted me to make a copy for an e-commerce app of a Turkish company whose name is https://www.trendyol.com. Everything and every decision on the project was chosen and decided by me for the frontend side. We were working with 4 developers who are 1 frontend(me), 2 backends, 1 platform on this project. I faced lots of critical issues, but I solved all of them. That was an amazing experience for me. I completed that project for 4-5 months. Then we dockerized the project lastly and we released the project. After that time I had got my best offer from Getir and I quit and I join my new amazing journey.

technologies: ['React', 'Typescript', 'Next.js', 'Redux', 'Redux-Thunk', 'node-sass/SCSS (for styling)', 'Gitlab', 'Gitlab CI', 'Cypress', 'Docker', 'next-i18next', 'react-hook-form', 'Discord']

mucahid.dev

[01/01/2020 – Current]

I especially wanted to talk to you about my portfolio project. This is my personal website. I am developing my own website since 2020. And the end of 2020 I released the second version as a CMS project. I had used Gatsby.js to developed the second version. And now I released the third version of my website by Next.js. I developed the third version by all of my experience and the best practices which I learned so far. Nowadays I have been learning about web3 and blockchain technologies. So I wrote a Smart Contract and implement a 'Support me' system on Blockchain.

I created its pages on Figma. But I am putting its Figma link for my resume.

https://www.figma.com/file/lSv7wkqqw95T2EYjtwCJ6l/mucahid.dev?node-id=0%3A1

I changed some parts on the coding phase but It will be like the Figma design generally. My personal website is on live now. If you wish you can look at it and also you can look at its Github codes. It is an open-source project.

I also want to mention AWS. I have still been learning AWS and improving my AWS skills. When I release my website first I had released on Vercel but now I moved it to AWS. I dockerized my project and push to ECS service of Amazon. Then I create a ECR service to use my dockerized project image and host it. Then I bind my google domain with Route53 and released it on mucahid.dev. And the most exciting thing is I integrated all of these processes with Github Actions. You will love it if you see the process. :)

technologies: ['React', 'Styled-Components', 'Next.js', 'Jest', 'Enzyme', 'Git', 'Github', 'Github Actions', 'Redux', 'Redux Thunk', 'AWS', 'Docker', 'Docker Compose', 'Cypress', 'React Testing Library', 'Eslint', 'Prettier', 'Stylelint', 'Husky', 'webpack-bundle-analyzer']

biletsepeti

[01/02/2018 – 31/08/2019]

Biletsepeti was the first SASS project I had worked. I was the only front-end developer. I was using Next.js for the framework. I developed most of the page designs by myself. (25 pages). Then in my fourth month, the client stopped the project for a while. After that, I focused on the other side project in my company. Those are about the calendar app and the donut app.

technologies: ['React', 'Typescript', 'Next.js', 'Redux', 'Redux-Thunk', 'node-sass/SCSS (for styling)', 'Bitbucket', 'next-i18next', 'Vercel', 'Zeplin', 'Adobe XD', 'Slack']
